PROFILE

I combine frontend architecture with advanced AI-assisted development. I build custom Claude Code skills, agent teams and reusable workflows for code generation, debugging, refactoring and production-oriented delivery. I also create fast, conversion-focused products and consistently target 99+ Lighthouse scores across Performance, Accessibility, Best Practices and SEO.

Alongside frontend, I ship production backend on PHP and Laravel: payment platforms, admin panels, financial ledgers and third-party payment integrations, including deployment and server operations.

20+ websites and products delivered. Commercial, SaaS and AI-powered products. **Languages:** EN / UA / RU.

WORK EXPERIENCE

QClay

Apr 2026 - Present

Lead Prompter, Frontend Developer & AI Engineer

Remote

- Build and ship premium websites, interfaces and interactive effects with React, Next.js, TypeScript, Tailwind, SCSS, WebGL and Three.js across 20+ projects.
- Create high-quality prompts for Lovable, Claude Code and other AI builders, including reusable prompts for complete websites and luxury visual effects.
- Develop AI-assisted workflows, integrate APIs, build Shopify themes and optimize shipped experiences toward 99+ Lighthouse scores.

Lafys

Apr 2026 - Present

Lead Prompter, Frontend Developer & AI Engineer

Remote

- Contribute to the full product lifecycle of Lafys - a curated library of design-grade prompts for Lovable, Claude and v0.
- Created approximately half of the products presented on the platform and developed tested prompts for complete AI-built websites.
- Develop and maintain the product website with Next.js, Sanity.io and TypeScript, while handling frontend optimization and debugging.

Fintech & iGaming Platforms

Jan 2026 - Present

Full-stack Developer (contract, PHP / Laravel)

Remote

- Contribute to a live P2P payment platform and two connected products, working directly on production systems that process real money.
- 212 commits across the payment platform: order routing, financial ledger, dispute handling, crypto payment integration and four operator panels.
- Own production operations: server migration, deployment, queue workers, scheduled jobs and post-release verification.

Jiraffy Marketplace

Nov 2025 - Apr 2026

Frontend Developer

Remote

- Built product listings, filters, cart and checkout flows with React, Tailwind CSS and SCSS.
- Implemented payment acquiring logic: held customer payments, released funds after admin approval and split payouts between seller and platform commission.
- Improved Lighthouse Performance from ~60 to 90+ and refactored 10+ components to reduce re-renders and layout shifts.

AI PROJECTS

INDEPENDENT

Business AI Agent & Website Assistant

Configurable AI agents for websites using RAG, embeddings, vector databases, OpenRouter, Claude API and OpenAI API.

INDEPENDENT

Configurable 18+ Conversational AI

Deeply configurable conversational chatbot with custom behavior instructions and user experience controls.

INDEPENDENT

Graph-Based AI System

AI product with graph-based logic for structured reasoning, customizable workflows and deep behavioral configuration.

INDEPENDENT AI PRODUCTS

AuraSynk, Velluma.ai & GONEV

AI products and Telegram bots with custom assistants, business instructions and AI-driven user journeys.

AI ENGINEERING FOCUS

I design the complete path from an idea or visual reference to a production-ready AI product: prompt architecture, model provider selection, retrieval and knowledge flows, agent instructions, website integration, Telegram bots, custom assistants, frontend delivery and iterative improvement. I also package complete websites, components and visual interactions into high-quality prompts for AI builders.

SELECTED DELIVERY

Portfolio Platform & Real-time Chat. Deployed an 8-page Next.js portfolio with a custom Sanity page builder, FSD architecture, Framer Motion, CI/CD on Vercel and Lighthouse 100 across Performance, Accessibility, Best Practices and SEO. Also built a full React school chat with authentication, rooms, threads, messages, online status, native WebSocket API and optimized re-renders.

PAYMENTS & PLATFORM ENGINEERING

P2P Payment Platform (Laravel 13, Filament 5, PHP 8.3). Four operator panels - admin, merchant, trader and support - over a double-entry ledger stored in minor units. Built order routing with deposit, limit, blacklist and cooldown filters, dispute and correction flows, commission tiers, multi-currency settlement and a merchant REST API with idempotent order and payout endpoints. Went live and processes real payments.

Crypto payment processing. Integrated a crypto payment provider for USDT deposits and mass payouts: HMAC-signed IPN webhooks with signature verification, idempotent crediting under row locks, per-trader deposit addresses, TOTP-verified payout batches and provider IP whitelisting. Diagnosed and closed a class of silent failures where a rejected webhook still returned success and the provider never retried.

Production operations. Migrated the platform to a dedicated server and verified it end to end: nginx, PHP-FPM, MySQL, Redis, supervisor queue workers, scheduled jobs, SSL and DNS. Wrote a one-command health check covering the parts that fail silently - workers, cron, storage, encryption keys and data integrity - and recovered the system after a database loss incident.

Security and audit work. Two-factor authentication with TOTP and recovery codes, audit logging with before/after values, IP allow-lists, rate limiting on search and record access, PII masking and explicit authorization on state-changing admin actions.

Legacy PHP casino platform. Fixed money-affecting defects in a live system: duplicate welcome bonuses on a single deposit, exchange rates frozen for four days, site rate not reaching game providers and duplicate free-spin wins on one provider callback. Closed a publicly exposed .git directory and separated database accounts by consumer.

Affiliate platform (Laravel, Filament). Revenue-share accounting split across two repositories. Found and fixed a missing period filter that silently overwrote weekly partner earnings, and verified the correction against independently recomputed figures.

TECHNICAL SKILLS

FRONTEND

React Next.js TypeScript JavaScript HTML5 CSS3 SCSS Tailwind CSS Framer Motion Responsive Design

BACKEND

PHP 8.3 Laravel 13 Filament 5 Livewire Blade Eloquent ORM Queues & Workers Task Scheduling REST APIs

PAYMENTS & FINTECH

Double-entry Ledger Crypto Payments (USDT) Webhooks / IPN HMAC Signatures Idempotency Payment Routing Shopify
Lemon Squeezy E-commerce Flows

DATA & INFRASTRUCTURE

MySQL Redis Supabase SQL Sanity.io GROQ Linux / Ubuntu Nginx Supervisor Cron SSL / Certbot

SECURITY

2FA / TOTP Audit Logging Access Policies Rate Limiting PII Masking Secret Rotation

CREATIVE DEV

WebGL Three.js Interactive Effects Motion Design Figma Pixel-accurate Implementation

AI ENGINEERING

OpenRouter Claude API OpenAI API Telegram Bot API RAG Embeddings Vector DBs AI Agents Prompt Engineering

AI DEVELOPMENT

Claude Code - Advanced Custom Skills Agent Teams Multi-agent Workflows Prompt Architecture AI-assisted Debugging Refactoring
Code Generation

AI TRAINING

Unsloth.ai JAX Keras Kaktus Fine-tuning Model Adaptation

TOOLS

Claude Code Lovable GitHub Git Vercel VS Code Cursor CI/CD

EDUCATION

Frontend Development Program

Sep 2025 - Present

Advanced practice in React, Next.js, TypeScript, responsive UI, accessibility, architecture, API integration, Sanity CMS, animation and collaborative Git workflows.
